RESEARCH EXPERIENCE

Doctorate program in Astronomy	2018
Thesis: "Classification and redshift estimation of new quasars in photometric surveys, using S-PLUS as study case"; Advisor: Prof. Claudia Mendes de Oliveira (IAG-USP)	
Instituto de Astronomia, Geofísica e Ciências Atmosféricas, Universidade de São Paulo São Paulo, Brazil	

Our object classifier is one of the pillars of the S-PLUS data releases, being the primary source of separation between stars, quasars and galaxies. This project has leveraged my knowledge in machine learning and software engineering for astronomy, as well as in querying, cross-matching and/or analyzing data from all major astronomical surveys, having a huge impact in the new era of JWST, LSST, and Euclid. I also worked in obtaining photometric redshifts for quasar candidates and I've been leading the search for anomalous quasars.

Exchange program at the University of Washington (12 months)

2022

Advisor: Prof. Željko Ivezić (UW)

During my internship at DiRAC/UW, I started working with the identification of C-rich and O-rich AGB stars in S-PLUS to study their distribution in the Milky Way, while also writing a paper on quasar photometric redshifts. At this point, we have developed a giant/dwarf classification for S-PLUS.

Exchange program at the University of Florida (4 months)

2017 / 2018

Advisors: Prof. Stephen Eikenberry (UF), Prof. Anthony Gonzalez (UF)

During my internship at UF, I started working with quasar/star separation for S-PLUS using color-color diagrams

Awarded time as Principal Investigator

2018

8 hours with Goodman spectrograph to observe quasar candidates, SOAR telescope
20 hours with GMOS-S spectrograph to observe quasar candidates, GEMINI-South telescope
